A CYCLONE'S WORK,

By LEONARD MALLOY.

(Copyright, 1909, by American Press Association.)

Ralph Kirby, convict, having a good record, was ordered to work with a party outside the prison inclosure. Of course prison officials stood over the workmen with loaded rifles and revolvers, so escape was as difficult as when they were within the walls.

But something came up in comparison with which the rifles of the guards were but as popguns. Kirby looked up from his work and saw a black cloud coming that looked more terrible than the judge who years before had passed sentence upon him. It was balloon shaped, the neck trailing on the ground. He glanced at the guards and saw that they were standing with their backs to the prison wall, with the cloud also behind them. He worked on and said nothing, but a hope was rising and swelling in his breast.

It passed between him and his guards. Being forewarned, he threw himself flat on the ground and held on to a stout bush. When it had passed the guards were nowhere to be seen. There was method in what he did when he started to run in the wake of the storm. It was the only direction he could go to find possible safety. He ran a mile over a ruined strip of country, when he came to a small village that had been wrecked. Before a house that had been turned around and blown over on its side a man was lying on his back dead. Kirby noticed that the head had been disfigured beyond recognition. He was planning ahead, and his plans were made with lightning rapidity. He took the dead man's clothing for himself and put his stripes on the dead man. Then, taking up the body, he carried it to a distance from the wrecked village and threw it in a ditch to make it appear that it had been carried by the cyclone from the prison.

The storm had no sooner passed than parties were sent out to scour the country for those convicts who had escaped. But they were not the only persons moving about. Without the narrow belt traversed by the storm no one had been injured, and rescue parties were coming from all directions. Kirby, whose long confinement had brought ill health, had by this time used up all his strength. In the outskirts of the village a house had been reduced to a heap of kindling wood. Kirby decided to crawl in under the wreck. He had wormed himself in as far as possible when a rescue party came along and, seeing his boots, uncovered him. Feigning death, he lay on his back, but one of the party put his ear to the hole and heard it throbbing. Liquor was poured down his throat, and he knew that his sham could not be kept up. Through partly closed lids he saw that no prison official was present, and he opened his eyes. He begged the party to leave him and go on to others who needed their attention. They were persuaded and did as he suggested.

Then came another party, and the convict, mistaking them for searchers from the prison, again feigned death. By this time it was dark, and his effort was more successful—almost too successful. They began to dig beside him, and when they had made a shallow grave they put him in and covered him with earth. He was about to cry out, when it occurred to him that they were not burying him, but laying his lantern upon the spot just in time to strike the corpse-like face of Convict Kirby rising from the grave.

Prison officials are not likely to be easily rattled, but Mackin had a few minutes before seen the body of the convict, and the sight of the dead man's features confronting him in this fashion was too much for his nerves. Throwing down his gun and lantern, he ran as fast as his legs would carry him. Kirby, kicking off the earth, arose from his grave, picked up the lantern and was hurrying away when he saw the light glisten on metal and found the gun. This gave him courage. He could either appear to be hunting for bodies or convicts as he liked. He worked his way through the people scurrying about till he heard a distant locomotive whistle. A few minutes later he struck the rails and by the lights near by a station. Best of all, the locomotive headlight shone far down the road and was slowly growing brighter. Throwing away his gun and lantern, he ran for the station and reached it just as the train pulled out. Being without money and fearing the station would be watched, he darted under a car and clung to the bottom.

Ralph Kirby is now a sheep raiser in Australia. He has been hunted for, not to be again imprisoned, but to be informed that the man who committed the crime he was convicted of has confessed. He has passed a point where the information would not materially interest him.

ADDRESS THIS PAPER, - DWIGHT, ILL.

ABSOLUTE ZERO.

The Freezing Point of Helium Gas Is Just Above It.

Although familiar to scientists, it is not generally known that the true zero of heat has been determined. By this absolute zero is meant a temperature which cannot get any colder, which means that no heat whatever exists or can exist at that point. This point is only about 450 degrees below the zero of our ordinary Fahrenheit thermometers or 273 degrees below the zero centigrade. To realize what it signifies a few words must be placed here defining heat itself.

Heat is caused simply by the thousands of little molecules in any body or thing vibrating very fast and thus sending out waves into the ether. When these waves strike any matter they cause that matter to become hot, as we say. Now, the faster these molecules vibrate the more heat is given out and the hotter is the body itself. The slower the molecules the colder the body. So, if a condition could be reached where the molecules did not vibrate at all, why, there could be no heat, and therefore the body would be absolutely cold. This condition of affairs is reached at the above mentioned number of degrees below our ordinary scales. It is needless to say, however, that this absolute zero of heat has never been attained on this earth, the closest ever reached by man being one degree above it. This is 272 below zero centigrade and is the freezing point of helium gas, which a German professor claims to have frozen at that temperature.

From this theory of heat a peculiar view is obtained of our bodies and articles of matter. We would find, if we had a microscope to see small enough, that every bit of matter at any temperature that we can now get is a seething mass of moving molecules and vibrating particles. One proof of this is when a metal expands on becoming warmer. If we weigh it we find that a hot body weighs no more than the same body cold, yet it gets larger, both longer and broader. To do this it must be composed of moving particles that on becoming excited get farther apart. Another proof is that liquids and gases have been forced through every solid that exists almost. This water has been forced through lead, sulphur dioxide through iron, etc. The computed size of these molecules is rather interesting. It is claimed that if a drop of water represented the earth the number of molecules in the drop would be about equal to the number of grains of sand in the earth.—Exchange.

Changing Her Mind.

By an unwritten law it is held to be the privilege of woman to change her

mind, a license of which she rarely falls to avail herself. The German proverb has it that "women are variable as April weather." According to an old English adage, "A woman's mind the winter winds change oft." In Spain it is much the same: "Women, wind and fortune soon change, and she can laugh and cry both in a wind." The old Latin poet Catullus was of opinion that "what a woman says to her ardent lover ought to be written on the winds or on running water." Even the gallant Sir Philip Sidney wrote:

He water plows and sows in the sand
And hopes the flickering wind with net to hold
Who hath his hopes laid on a woman's hand.

—Kansas City Star.

A High Day.

"Yassah, I suttinly would do dat job for yo', colonel, and proud o' de chance to extinguish mubsef." Would horraw right in on it dis minute, sah, if 'twuzn't for one thing," said a certain lopsided colored citizen who was so unafraid of manual labor that he would often fall asleep in its presence, "and dat is, sah, dat I never likes to stigmatize mubsef by working on a hollerday."

"Why, this is not a holiday," returned the would be employer.

"Yassah! The wid me, if you'll dars 'kuss me, sah. It's de university o' de day mub' oldest boy was done sent to de penitentiary."—Puck.

Wild Animals in New York City.

It is a remarkable fact that there are always more wild animals about than any but the expert has an idea of. For example, there are within twenty miles of New York city fully fifty different kinds—not counting birds, reptiles or fishes—one quarter of which at least are abundant, or more particularly within the limits of Greater New York there are at least a dozen species of wild beasts, half of which are quite common.—Country Life In America.

Getting Used to 'Em.

"I just have heard of the arrival of the third child in the Jones family," remarked the woman. "The announcement of the firstborn was made by beautifully engraved cards tied with tiny white ribbon, the second was by telegraph, and this third one, though a much wished for boy, was made merely by a postal card."—New York Press.

She Could Talk.

Cynicus—That girl never says much, does she? Sillicus—Why, she talks all the time. Cynicus—That doesn't alter my contention.—Philadelphia Record.

Doubted the Statistics.

"How did Harkins act when he heard he had triplets in his family?" "He could hardly believe his own census."—Boston Transcript.

Little Ruth is a great chatterbox. One day recently her mother said, "Ruth you talk too much; you do not hear me jabbering all day long." "No, mam," replied the little Miss, "but you've lived an awful long time and have had time to get most of the talk out of you."

For indigestion and all stomach troubles take Foley's Orino Laxative. It is the natural remedy for indigestion, dyspepsia, heartburn, bad breath, sick headache, torpid liver, biliousness and habitual constipation. Foley's Orino Laxative sweetens the stomach and breath, and tones up the entire alimentary system. Sold by all druggists.

The sympathetic neighbor asked, "Is your little brother ill this morning, Johnnie? I heard him crying in the most heartrending manner."

"No, not exactly," Johnnie explained, "but Willie pulled down a jug of molasses on himself in the pantry, and mother has been trying to comb his hair."

Simple Remedy for LaGrippe.

LaGrippe coughs are dangerous, as they frequently develop into pneumonia. Foley's Honey and Tar not only stops the cough, but heals and strengthens the lungs so that no serious results need be feared. The genuine Foley's Honey and Tar contains no harmful drugs and is in a yellow package. Sold by all druggists.

English Girl—You American girls have not such healthy complexions as we have. I cannot understand why our noblemen take a fancy to your white faces.

American Girl—It isn't our white faces that attract them, my dear; it's our greenbacks.

Beware of Ointment for Catarrh That Contains Mercury.

as mercury will surely destroy the sense of smell and completely derange the whole system when entering it through the mucous surfaces. Such articles should never be used except on prescriptions from reputable physicians as the damage they will do is ten fold to the good you can possibly derive from them. Hall's Catarrh Cure, manufactured by F. J. Cheney & Co., Toledo, Ohio, contains no mercury, and is taken internally, acting directly upon the blood and mucous surfaces of the system. In buying Hall's Catarrh Cure be sure you get the genuine. It is taken internally and made in Toledo, Ohio, by F. J. Cheney & Co. Testimonials free. Sold by druggists. Price, 75c per bottle.

Take Hall's Family Pills for consti-
