

Country Products

fresh from the farm are what we offer. Our butter and eggs are the finest obtainable and just as fresh as if you owned the cow and hens.

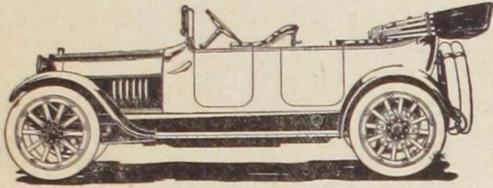

OUR GROCERIES are always fresh. No old shop worn goods are ever found here at any price; only the best at the lowest possible prices.

W. A. CHESTER

DWIGHT "Marco Grocer" ILLINOIS

We are going to give you **One Hundred and One Reasons for Buying the New Chalmers "Six"**

Ten will be given each week

Chalmers "Six"—Model Twenty-four—Five-passenger Touring Car

- 71—**Bear Spring Bumpers and Rebound Straps**—In addition to having underslung rear springs, easy riding is further insured by the use of heavy rebound straps. After passing a bump in the road, the new "Six" recovers almost instantly, eliminating much of the usual annoying jolting.
- 72—**No Windshield Stay Rods**—The new fastening of the Chalmers windshield eliminates the customary stay rods. The windshield is built directly into the cowl of the dash. It is absolutely rigid and non-rattling. A feature of the new construction is a convenient handle on the side of the windshield, making access to the front seats easy.
- 73—**Rigid Steering Column**—The steering column of the Model 24 is fully enclosed. It's perfect rigidity is further insured by a heavy brace fastened to the cowl of the dash. With this construction the customary vibration of the steering column is eliminated.
- 74—**Long Wheel Base**—The wheel base of the new "Six" is 132 inches. This insures easiest possible riding over road inequalities. Nor has the wheel base been so greatly lengthened as to make turning difficult. The new steering gear construction enables the operator to turn his car in an unusually small radius.
- 75—**Hyatt Roller Bearings in Transmission**—Chalmers transmission is supplied with special Hyatt flexible roller bearings. These bearings make gear operation smooth and noiseless. They also insure the longest possible wear.
- 76—**Seats Pitched Backward for Riding Ease**—Both front and rear seats are constructed with a slight backward pitch so that driver and passengers sit in a perfectly natural and comfortable position.
- 77—**Unusual Rigidity Combined with Light Weight**—Riding in the new "Six" for the first time, one is instantly impressed with the absence of vibration throughout the car. The entire car is exceptionally rigid, secured through the use of heavy wheels, heavy frame, and long wide springs. At the same time the construction is of extraordinarily light weight. This is made possible by the use of highest grade steels throughout the car.
- 78—**Unusual Pulling Power**—Not only is there an absence of vibration, but there is a sense of wonderful power. In deep sand or mud or on the steepest hills the Model 24 motor pulls steadily and without jumps or jerks.
- 79—**Every part Tested Under All Conditions**—This feeling of solidity and comfortable sense of safety in the new "Six" has been secured through the most rigid tests of every part used in the car. Experimental models of the new "Six" have been on the road in all parts of the country for two years. They were given the severest tests by our own engineers before the car was put on the market.
- 80—**Built Complete in Chalmers Shops**—The new "Six" is built complete in Chalmers shops. We are not dependent on specialty manufacturers. Every part built by Chalmers experts under rigid Chalmers inspection. This method of manufacturing is owner's guarantee of satisfaction throughout the life of the car.
